Subject: SOP Revision

Bill:

Bonnie has approved our recommended modifications to SOP ISSI-VBI70-02, Residential Soil Sampling for Yards, and School or Park Soils, which I will forward by FAX. Additionally, Bonnie provided verbal direction during Phase IIIA regarding a reduced sample number for very small yards; with Bonnie's approval, please also add this modification to the revised SOP:

Sec. 4.1.4 Please change "relative distance between each sample point" to "relative grid area per sample point" in second and third sentences. Add "The number of total sample points may be reduced from 30 to 15 (3 5-point composites) at properties with a very limited sample area. The sample points will be reduced to 15 at those properties where placing 30 sample points would result in points being less than five feet apart (total sample area is less than 750 square feet)."

I have rescheduled sampling operations to re-start on Wednesday 3/29. If at all possible, please provide the revised procedure to Bonnie on Monday so that she can approve and we can pick-up on Tuesday. [Bonnie: SOP MK-VBI70-06 will be delivered first thing Monday.] If you or Bonnie foresee any issues related to this schedule, please let me know as soon as possible.

Thanks.
